

ASTERISM WHALE'S HEAD

Cetus, the Whale or Sea Monster, is an ancient constellation. The asterism, a pentagon of five stars, marks the head of the Whale. The principal star in the Whale's Head is Merak, a red giant. The other stars are Kaffalijidhma, Xi2 Ceti, Mu Ceti and Lambda Ceti.

Cetus is located in the region of the sky that contains other water-related constellations such as Aquarius, Pisces and Eridanus.

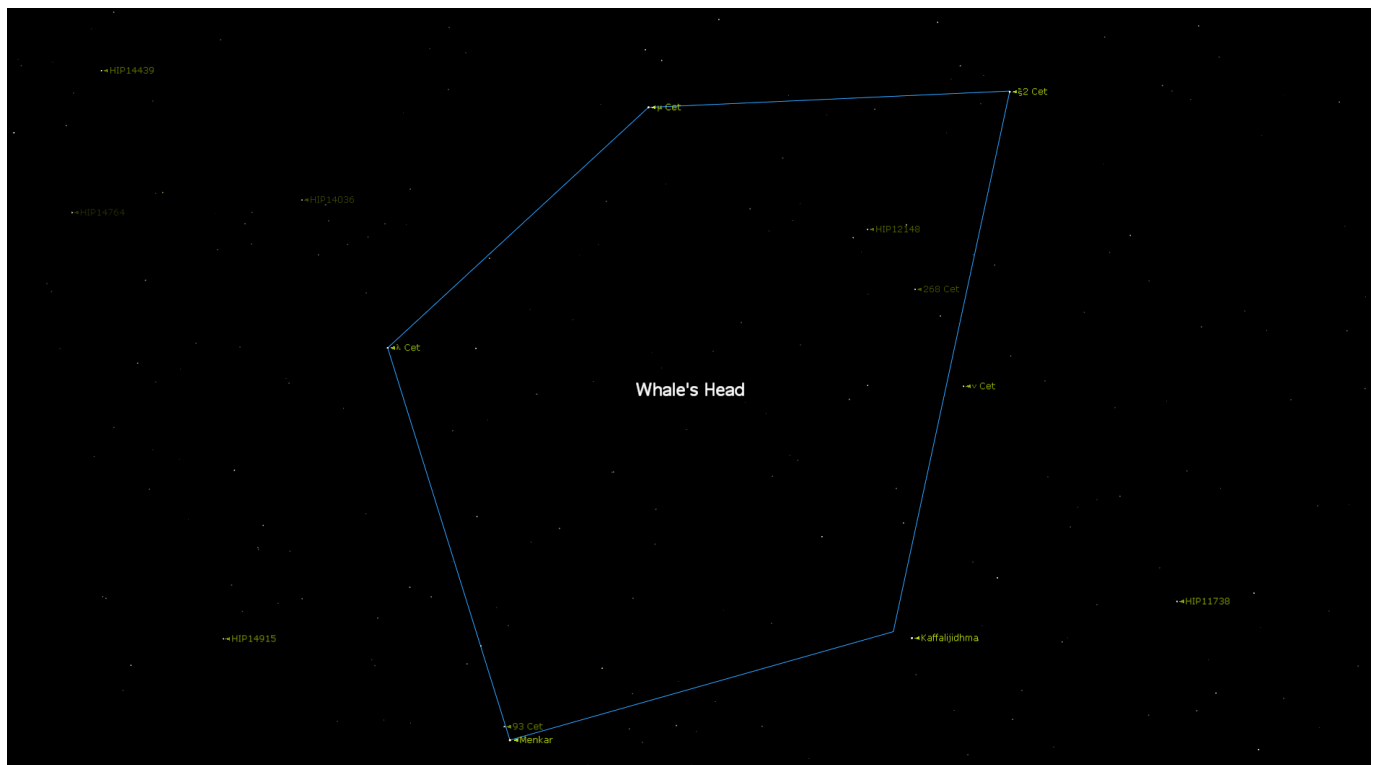

Cetus has been identified, at least since Aratos' day (3rd century B.C.), with the fabled creatures sent by Neptune (Poseidon) to devour Andromeda, but turned to stone at the sight of Medusa's head (Algol) in the hand of Perseus.

Cetus is positioned on the banks of the river Eridanus, the other side of his body is bordered by the constellation Pisces.

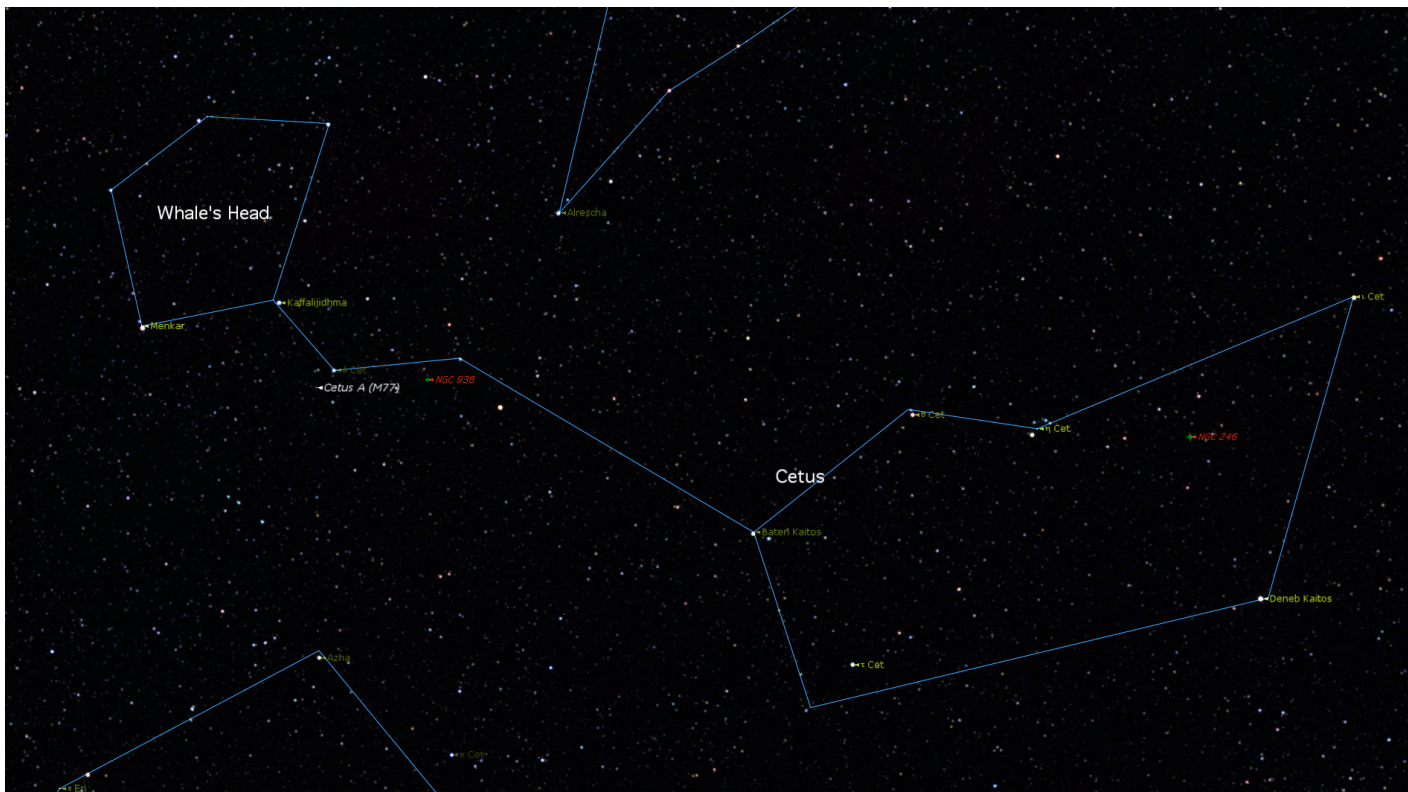

Asterism - An asterism is a distinctive pattern of stars or a distinctive group of stars in the sky.

Constellation - A grouping of stars that make an imaginary picture in the sky. There are 88 constellations.
